

SQL Test - 4

Name: Sanjay Kumaran.

1) create DB Product, create a table product-Details with following fields Product ID, Product Name, unit price, stock qty and set the appropriate data type also set the following constraint

Product ID $\rightarrow$ Should not allow duplicate and null values

Product Name $\rightarrow$ Should not allow null values

Unit Price $\rightarrow$ Should be set with default value as 1

If user not enters data for it

Stock Qty $\rightarrow$ Should not allow null values

After creation of table display the description of it.

~~(1.00, 'Apple', 1.00, 100), (2.00, 'Banana', 2.00, 200), (3.00, 'Orange', 3.00, 300)~~

~~(1.00, 'Apple', 1.00, 100), (2.00, 'Banana', 2.00, 200), (3.00, 'Orange', 3.00, 300)~~
create Database If not exists Products;

use Products;

create table Products-details (

Product-ID Primary key,

Product-name varchar (15) not null,

unit-price float default 1,

stock Qty int not null,

;

);

desc Product-details;

2) change the table name from Product Details
to Pro-Details. Insert 5 data for the above table.
Print the details in descending Order.

Alter table Product_details Rename to

Product_detail

insert into Product_detail (Product-id,
Product_name, Unit-Prices, Stock-Qty)

Values (101, 'Velu', 2500.00, 2), (102, 'Navini',
4500, 2), (103, 'Ball', 100.2), (104, 'Ram',
1000, 2), (105, 'User', 1020.00, 1);

Select Product_name from Pro-details
Order by Desc;

(Printed - table)
